Preface	ix
Acknowledgments	xi
I The Province of Polynomia	1
1 Horner's Form	7
1.1 Horner's Form and Synthetic Division	8
1.2 Horner's Form and Efficient Computation	11
1.3 Horner's Form and Lill's Method	13
1.4 History, References, and Additional Reading	22
2 Polynomial Potpourri	25
2.1 A Perplexing Puzzle	25
2.2 The Quadratic Formula, Insideout	25
2.3 Solving Cubics with Curly Roots	26
2.4 Chaos in Newton's Method	28
2.5 Polynomial Interpolation	33
2.6 Palindromials	34
2.7 Marden's Theorem	41
2.8 Solution to a Perplexing Puzzle	43
2.9 History, References, and Additional Reading	43
3 Polynomial Roots and Coefficients	45
3.1 Roots and symmetric functions	46
3.2 Root Identities	51
3.3 Newton's Identities	57
3.4 History, References, and Additional Reading	63
4 Solving Polynomial Equations	65
4.1 Existence Questions	66
4.2 Historic Solution of Cubics and Quartics	71
4.3 Alternate Solutions for Cubics	78
4.4 Alternate Solutions for Quartics	84
4.5 Solving Quartics with Symmetry	87
4.6 Quintic and Higher Degree Equations	92
4.7 History, References, and Additional Reading	95

II	Maxministan	97
5	Leveling with Lagrange: Constrained Maxima and Minima with Lagrangian Functions	101
5.1	Intuitive Justifications for the Standard Approach	102
5.2	The Lagrangian Function Approach	107
5.3	An Example	108
5.4	A Theorem	109
5.5	Presentations of the Fallacy	110
5.6	In Defense of the Fallacy	111
5.7	Leveling the Playing Field	115
5.8	History, References, and Additional Reading	117
6	A Maxmini Miscellany	119
6.1	Milkmaids and Elliptical Mirrors	119
6.2	Getting an Angle on Rotated Conics	121
6.3	Tracing the Borders of String Art Designs	126
6.4	Weighing Means: Arithmetic and Geometric	129
6.5	Isoperimetric Duality	131
6.6	A Discontinuous Objective Function	137
6.7	History, References, and Additional Reading	138
7	Envelopes and the Ladder Problem	141
7.1	A Traditional Approach to the Ladder Problem	142
7.2	A Direct Approach to the Ladder Problem	144
7.3	Extending the ladder problem	147
7.4	Duality in the Ladder Problem	155
7.5	History, References, and Additional Reading	157
8	Deflection on an Ellipse	159
8.1	The Problem	159
8.2	The Answer	160
8.3	Constructing the Maximal Deflection	161
8.4	Lagrange Multipliers	162
8.5	Direct Parameterization	164
8.6	Using Slopes	165
8.7	Symmetry	166
8.8	Generalization to \mathbb{R}^n	167
8.9	History, References, and Additional Reading	170
III	The Calculusian Republic	171
9	A Generalized Logarithm for Exponential-Linear Equations	175
9.1	Expanding the Tool Box	175
9.2	Defining glog	176
9.3	Solving Exponential-Linear Equations	179
9.4	Applications	181
9.5	Inequalities and Estimates	183
9.6	Differentiation and Integration	184

9.7	Computation of glog	187
9.8	History, References, and Additional Reading	190
10	Envelopes and Asymptotes	193
10.1	Envelope Basics	193
10.2	The Traditional Definition of Envelope	194
10.3	The Envelope Algorithm Rederived	197
10.4	Boundary Points On Envelopes	199
10.5	Intersections of Neighboring Curves	200
10.6	Asymptotes	203
10.7	Detecting Horizontal Asymptotes	207
10.8	Asymptotic Polynomials and Rational Functions	208
10.9	History, References, and Additional Reading	210
11	Derivatives Without Limits	213
11.1	Descartes' Method	213
11.2	Differentiation Rules	220
11.3	Exponential Functions	224
11.4	Sine and Cosine	226
11.5	History, References, and Additional Reading	228
12	Two Calculusian Miracles	229
12.1	The First Miracle	230
12.2	Why Is Calculus Important?	232
12.3	Discrete Models of Change	233
12.4	The Second Miracle	243
12.5	History, References, and Additional Reading	247
	References	249
	Index	259
	About the Author	265
